

### What Problem Does This Solve?

The Safegate Manhole Barrier offers an excellent solution for when you need to deter entry to pedestrians and block access. Each pedestrian barrier is made from lightweight High Density Poly Ethylene (HDPE) and makes them highly durable and easy enough to lift and store when needed.

### Knowledge Share

The barriers are available in a 3-sided or 4-sided format with the option to attach multiple units together via the hinged clip on each one.

The locking mechanism on each barrier allows you to lock the barrier in place which will also aid with stability when they are being used in a straight line together.

When not in use the Safegate barriers can be folded and stored with ease.

3-sided:

Length single gate 750 mm

Total length 2250 mm

Height 1000 mm

Weight 6 kg

4-sided:

Length single gate 750 mm

Total length 3000 mm

Height 1000 mm

Weight 8 kg

**Success Factors** If applicable, describe the conditions that need to be in place for this knowledge to be successfully replicated: **Have a need for light-weight, portable barrier system.**

**Constraints** What were the challenges encountered when applying the good practice? How were they addressed? **N/A**
